It currently consists of 14 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    NOTE: This is a 'working draft' sequence. It currently consists of 19 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        7902; contig of 7902 bp in length 8002; gap of 100 bp 18899; contig of 10797 bp in length 18899; contig of 10797 bp in length 32870; gap of 100 bp 3289; contig of 5019 bp in length 38089; gap of 100 bp 40307; contig of 5019 bp in length 40407; gap of 100 bp 6100 bp 6100

coverage: 14.32x in Q20 bases; agarose-fp NOTE: This is a 'working draft' sequence. It currently consists of 2 contigs. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved. .. 0 AL845324 161204 bp DNA linear HTG Danio rerio clone CH211-122L14, WORKING DRAFT SEQUENCE, pieces. ```

```
During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone amen. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats, all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession numbers given in the feature table with thair source databases:

Ems., EMBL; Sww., SWISSEROT; Tr., TREMBL; Wp., WORNPEP; Information on the WORNPEP database can be found at http://www.sanger.ac.uk/Projects/C elegans/wormpep Clone-derived length of mononucleotide A/T runs and conserved TA repeats. Where this is found the longest good quality representation will be
56544
                                                                                                                                                                                                                                                                                                                                                                                                              AL935208 151406 bp DNA linear VRT 17-JUL-2003 Zebrafish DNA sequence from clone CH211-241N17, complete sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Repeat names beginning 'Dr' were identified by the Recon repeat discovery system (Zhirong Bao and Sean Eddy, submitted), and those beginning 'drr' were identified by Rick Waterman (Stephen Johnson lab, WashU).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         * NOTE: This record contains 55 individual
sequencing reads that have not been assembled into
contigor. Runs of N are used to separate the reads
and the order in which they appear is completely
arbitrary. Low-pass sequence sampling is useful for
identifying clones that may be gene-rich and allows
overlap relationships among clones to be deduced.
However it should not be assumed that this clone
will be sequenced to completion. In the event that
the record is updated, the accession number will
be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   f 100 bp in length of 1100 bp in length f 100 bp in length of 1125 bp in length

It currently consists of 11 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

It currently a consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as thus of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

FRANCE
PCR was performed on DNA from transformants of Arabidopsis thaliana plants from INRA (Versalles). The DNA fragment(s) resulting from the PCR were directly sequenced from the left or the right border to determine the genomic sequence flanking the insertion. T-DNA derived sequences were removed. Information to order the corresponding mutent line and a link to a database providing a graphical display of the insertion site are available at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AJS92026 1407 bp DNA linear PLN 23-OCT-2003

TITLE Direct Submission	JOURNAL Submitted (23-OCT-2003) Balzergue S., UMRGV, INRA/CNRS, 2 rue Gaston Cremieux, 91057 Bryr cedex, FRANCE COMMENT PCR was performed on DNA from transformants of Arabidopsis thaliana plants from INRA (Versalles). The DNA fragment(s) resulting from the PCR were directly sequenced from the left or the right border to determine the genomic sequence flanking the insertion. T-DNA derived sequences were removed. Information to order the corresponding mutant line and a link to a database providing a	graphical display of the insertion site are available at http://dbsgap.versailles.inra.fr/publiclines/. This sequence has been generated in the framework of the French plant genomics program 'Genoplante' (http://www.genoplante.com and http://genoplante-info.infoblogen.fr). Balzergues.

Losubmitted (23-00T-2003) Balzergue S., UMRGV, INRA/CNRS, 2 rue Submitted (23-00T-2003) Balzergue S., UMRGV, INRA/CNRS, 2 rue Gaston Cremieux, 91057 Bry cedex, FRANCE

PCR was performed on DNA from transformants of Arabidopsis thaliana plants from INRA (Versailles). The DNA fragment(s) resulting from the PCR were directly sequenced from the left or the right border to determine the genomic sequence flanking the insertion T-DNA derived sequences were removed. Information to order the corresponding mutant line and a link to a database providing a graphical display of the insertion site are available at the they://dbsgap.versailles.inra.fr/publiclines/. This sequence has been generated in the framework of the French plant genomics program 'Genoplante' (http://www.genoplante.com and http://genoplante-info.infoilogen.fr). ö brunaud, V., Balzergue, S., Dubreucq, B., Aubourg, S., Samson, F.,

Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
Research Center (DKF2); Email s. wiemann@dkfz- heidelberg.de;
sequenced by Qiagen (Hilden/Germany) within the cDNA sequencing
consortium of the German Genome Project.

This clone (DKFZp686FD1268) is available at the RZPD in Berlin.
Please context the RZPD: Ressourcenzentrum, Heubnerweg 6, 14059

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

New breast-specific nucleic acids and polypeptides, useful for identifying, diagnosing, monitoring, staging, imaging, and treating breast cancer and non-cancerous disease states in breast tissues.

Claim 1; Page 191; 281pp; English.

The invention relates to breast specific nucleic acids (BSNA) and breast-specific polypeptides (BSP). Also included are a method for determining the BSNA in a sample, a vector comprising a BSNA, a host cell comprising the vector, a method for producing a polypeptide encoded by a BSNA, an anti-BSP antibody and a method for determining the presence of a BSP in sample. The breast-specific nucleic acids, polypeptides and compositions comprising them are useful for identifying, diagnosing, monitoring, eaginging, and treating breast cancer, mammary tumour and noncarregular in an information and included and included in the polypeptides; in gene therapy; in producing transgenic animals and the polypeptides; in gene therapy; in producing transgenic animals and

cells; for producing engineered breast tissue for treatment and research; and as elements in an array or computer program for pattern recognition of breast disorders. The nucleic acids may be used as hybridisation probes to detect, characterise and quantify hybridising nucleic acids in, and isolate hybridising nucleic acids from, both genomic and transcript derived nucleic acid samples. The BSP protein may be used in a vaccine composition for raising an immune response against breast cancer. The present sequence is BSNA cDNA of the invention

The invention relates to breast specific nucleic acids (BSNA) and breast-
Specific polypeptides (BSP). Also included are a method for determining
the BSNA in a sample, a vector comprising a BSNA, a host cell comprising
the vector, a method for producing a polypeptide encoded by a BSNA, an
anti-BSP antibody and a method for determining the presence of a BSP in a
sample. The breast-specific nucleic acids, polypeptides and compositions
comprising them are useful for identifying, diagnosing, monitoring,
staging, imaging, and treating breast cancer, mammary tumour and non-
comprising them are useful for identifying adjoints and antagonists of
the polypeptides; in gene therapy; in producing transgenic animals and
cells; for producing engineered breast tissue, for identifying and
cells; for producing engineered breast tissue for treatment and research;
and as elements in an array or computer program for pattern recognition
of breast disorders. The nucleic acids may be used as hybridisation
and isolate hybridising nucleic acids from, both genomic and transcript-
derived nucleic acid samples. The BSP protein may be used in a vaccine
composition for raising an immune response against breast cancer. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  121 TCCTCCTATTGTTTAACATTTGCGTTGCTTCTCATTTTGACCTATTTTAAACAGGCCTCT 180

The invention relates to human breast cancer expressed polynucleotides (AALO7544-AAL26789) and methods of assessing whether a patient is afflicted with breast cancer by examining the correlation between the expression of certain markers and the cancerous state of breast cells. The polynucleotides and encoded polypeptides are potential markers for detecting, diagnosing, monitoring, characterising treating and potentially preventing breast cancer. The polynucleotides and encoded polypeptides are also useful for isolating compounds with cytostatic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   115
                                The invention relates to human breast cancer expressed polynucleotides (AAL07544-AAL26789) and methods of assessing whether a patient is afflicted with breast cancer by examining the correlation between the expression of certain markers and the cancerous state of breast cells. The polynucleotides and encoded polypeptides are potential markers for detecting, diagnosing, monitoring, characterising treating and potentially preventing breast cancer. The polynucleotides and encoded polypeptides are also useful for isolating compounds with cytostatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      174 AAAATGGCCTCTTTAAATATACACTTCTCTGTAGTGTATGCTAGAAATGGAGTGGCTGGA

The invention relates to human breast cancer expressed polynucleotides (AALO7544-AAL26789) and methods of assessing whether a patient is afflicted with breast cancer by examining the correlation between the expression of certain markers and the cancerous state of breast cells. The polynucleotides and encoded polypeptides are potential markers for detecting, diagnosing, monitoring, characterising treating and potentially preventing breast cancer. The polynucleotides and encoded polypeptides are also useful for isolating compounds with cytostatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        169 AAACAGGCCTCTTTAAATATACACTTCTCTGTAGTGTATGCTAGAAATGGAGTGGCTGGA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                174 AAAATGGCCTCTTTAAATATACACTTCTCTGTAGTGTTATGCTAGAAATGGAGTGGCTGGA 115
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to human breast cancer expressed polynucleotides (AALO7544-AAL26789) and methods of assessing whether a patient is afflicted with breast cancer by examining the correlation between the expression of certain markers and the cancerous state of breast cells. The polynucleotides and encoded polypeptides are potential markers for detecting, diagnosing, monitoring, characterising treating and polypeptides are also useful for isolating compounds with cytostatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAACAGGCCTCTTTAAATATACACTTCTCTGTAGTGTATGCTAGAAATGGAGTGGCTGGA

                                                                                                                                     The invention relates to human breast cancer expressed polynucleotides (AALO7544-AAL26789) and methods of assessing whether a parient is afflicted with breast cancer by examining the correlation between the expression of certain markers and the cancerous state of breast cells. The polynucleotides and encoded polypeptides are potential markers for detecting, diagnosing, monitoring, characterising treating and potentially preventing breast cancer. The polynucleotides and encoded polypeptides are also useful for isolating compounds with cytostatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to human breast cancer expressed polynucleotides (AAL07544-AAL26789) and methods of assessing whether a patient is

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              97 AAAATGGCCTCTTTAAATATATACGCTTCTCTGTAGTGTATGTGTAGAAATGGAGTGGCTGGA 156
                                                                                                                                                                                                                                                                                                                          The invention relates to human breast cancer expressed polymucleotides (AA107544-AA126789) and methods of assessing whether a patient is afflicted with breast cancer by examining the correlation between the expression of certain markers and the cancerous state of breast cells. The polymucleotides and encoded polypeptides are potential markers for detecting, diagnosing, monitoring, characterising trearing and potentially preventing breast cancer. The polymucleotides and polypeptides are also useful for isolating compounds with cytostatic

                                                                                                                                                                                                                                           The invention relates to human breast cancer expressed polymucleotides (AAL07544-AAL26789) and methods of assessing whether a patient is afflicted with breast cancer by examining the correlation between the expression of certain markers and the cancerous state of breast cells. The polymucleotides and encoded polypeptides are potential markers for detecting, diagnosing, monitoring, characterising treating and potentially preventing breast cancer. The polymucleotides and encoded polypeptides are also useful for isolating compounds with cytostatic activity

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to human breast cancer expressed polynucleotides (AALO7544-AAL26789) and methods of assessing whether a patient is afflicted with breast cancer by examining the correlation between the expression of certain markers and the cancerous state of breast cells. The polynucleotides and encoded polypeptides are potential markers for detecting, diagnosing, monitoring, characterising treating and potentially preventing breast cancer. The polynucleotides and encoded polypeptides are also useful for isolating compounds with cytostatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     169 AAACAGGCCTCTTTAAATATACACTTCTCTGTAGTATGCTAGAAATGGAGTGGCTGGA
